This section covers the core components of internal combustion engines (ICE), electric motors, and hybrid systems. Topics include:

- ICE Basics: Thermodynamic cycles (Otto, Diesel), fuel injection, combustion efficiency.
- Electric Powertrains: Motor types (DC, AC, BLDC), battery chemistries (Li ion, solid state), regenerative braking.
- Hybrid Configurations: Series, parallel, and power split hybrids.
- Performance Metrics: Power, torque, efficiency curves, and emissions standards.

Students often use these notes to model powertrain performance in simulation software such as MATLAB/Simulink or CarSim.

Understanding how power is transferred from the engine to the wheels is crucial. The notes cover:

- Gearbox design principles (gear ratios, planetary gearsets).

- Differential mechanics and torque distribution.
- Clutch and torque converter dynamics.
- Transmission types: manual, automatic, CVT, and dual clutch.

Hands on labs often involve building a small scale gearbox model to visualize gear interactions.

Vehicle dynamics is the study of how a car behaves under various forces. Key concepts include:

- Suspension Systems: MacPherson strut, double wishbone, active suspension.
- Steering Geometry: Ackermann, camber, caster angles.
- Braking Dynamics: ABS, electronic brakeforce distribution.
- Dynamic Modeling: 2 wheel, 4 wheel, and full vehicle models.

Simulation of vehicle dynamics is often performed using tools like Adams Car or Simulink.

Choosing the right materials and processes affects performance, cost, and sustainability. Topics include:

- Metals (steel, aluminum, magnesium) and composites (carbon fiber, fiberglass).
- Manufacturing techniques: casting, forging, extrusion, additive manufacturing.
- Surface treatments and corrosion protection.
- Life cycle assessment and recyclability.

Students frequently compare material properties using data tables in the notes.

With global emissions targets tightening, this section explores:

- Alternative fuels: biofuels, hydrogen, synthetic fuels.
- Fuel cell technology and electrolyzers.
- Emission control devices: catalytic converters, particulate filters.
- Regulatory frameworks (Euro 6, EPA Tier 3).
