Operating Instructions

Powering On

Before turning the machine on, ensure the water tank is full of clean water and the filter is properly installed. Locate the power button on the handle. Press it once to start the vacuum. The display will show the operating mode and suction level.

Using the Vacuum

The vacuum mode is ideal for dry cleaning of carpets, rugs, and hard floors. Adjust the suction level using the dial on the handle. For maximum suction, select the highest setting. When cleaning pet hair, use the "Pet Hair" setting to optimize performance.

Using the Carpet Cleaner

To activate the carpet cleaning mode:

1. Press the "Carpet Cleaner" button on the control panel.
2. Attach the cleaning head to the vacuum.
3. Ensure the water tank is full.
4. The machine will heat the cleaning solution to the optimal temperature, which helps lift dirt and stains.
5. Move the cleaning head slowly across the carpet, following the recommended pattern in the manual.

For best results, use a mild cleaning solution recommended by Bissell. Avoid harsh chemicals that could damage the carpet fibers.

Adjusting Settings

The Bissell ProHeat Advantage offers multiple settings to tailor cleaning to specific surfaces:

- Hard Floor: Low suction with a soft brush roll.
- Carpet: High suction and heat assisted cleaning.
- Pet Hair: Specialized setting that increases suction and uses a tangle free brush roll.
- Upholstery: Low suction with a dusting brush attachment.

Always refer to the manual's table of recommended settings for each surface type.

Maintenance & Care

Emptying & Cleaning the Tank

After each cleaning session, empty the water tank and rinse it with warm water to remove residue. Dry the tank thoroughly before refilling to prevent mold growth.

Replacing Filters

Filters should be replaced every 2–3 months, depending on usage. To replace a filter:

1. Open the filter housing by sliding the cover back.
2. Remove the old filter and discard it.
3. Insert the new filter, ensuring it is seated correctly.
4. Close the housing and secure it.

A clean filter ensures optimal suction and protects the internal components.

Cleaning the Brush Roll

Hair and debris can clog the brush roll, reducing suction. To clean it:

1. Detach the brush roll from the vacuum.
2. Use a comb or pair of scissors to remove tangled hair.
3. Rinse the brush roll under running water.
4. Dry completely before reattaching.

Check the brush roll for signs of wear; replace if it’s worn or damaged.

Troubleshooting Common Issues

Vacuum Won’t Start

Possible causes include:

- Empty water tank or clogged filter.
- Power cord not plugged in or damaged.
- Faulty power button.

Check each component and refer to the manual’s troubleshooting table for detailed solutions.

Low Water Pressure

Low pressure may result from:

- Air leaks in the water tank seal.
- Clogged nozzle or filter.
- Improperly attached tank.

Inspect seals, clean the nozzle, and ensure the tank is securely attached.

Leaking Water

Leaks can occur if the water tank is not sealed properly or if the hose is damaged. Tighten the tank lock ring and inspect the hose for cracks. Replace any damaged parts immediately.

Turn off the machine, inspect for obstructions, and tighten any loose screws or parts.
