## Getting Started: A Step by Step Guide

Once you have the manual in hand, follow these steps to set up and use your Craftsman Model 917 effectively.

### 1. Unpacking and Initial Inspection

Remove all packaging materials and inspect the mower for any visible damage. Check the blade for cracks, the frame for dents, and the oil reservoir for leaks. The manual's "Initial Inspection" section will guide you through this process.

### 2. Fueling and Oil Levels

Use only the recommended gasoline (typically 87 octane) and oil (synthetic or conventional, depending on the model). The manual specifies the oil capacity—usually around 2.5 quarts—and the correct oil type for optimal lubrication.

### 3. Adjusting the Blade Height

Adjust the cutting height to match your grass length. The manual explains how to use the height adjustment lever, ensuring a clean cut without scalping the lawn.

### 4. Starting the Engine

Follow the step by step starting procedure: set the throttle to idle, pull the starter rope or engage the electric starter, and allow the engine to warm up. The manual details the correct sequence to avoid engine damage.

### 5. Operating the Mower Safely

Read the safety section carefully. Keep your hands and feet clear of the blade, use the seat for support, and always wear closed toe shoes. The manual emphasizes the importance of maintaining a steady pace and avoiding sudden turns.

## Maintenance Tips from the Manual

Regular maintenance is key to a mower's longevity. The Craftsman 917 manual outlines a comprehensive schedule that includes:

- Blade Sharpening – Sharpen the blade every 30–40 hours of use or as soon as you notice uneven cutting.
- Filter Replacement – Replace the air filter every 100 hours or if it appears clogged.
- Oil Change – Change the oil every 200 hours or at least twice a season.
- Cooling Fan Inspection – Ensure the cooling fan is free of debris to prevent overheating.
- Brake Check – Inspect the brake system for wear and adjust the brake pad as recommended.

## Troubleshooting Common Issues

Even the best machines can encounter problems. The manual's troubleshooting guide is invaluable for diagnosing and fixing issues quickly. Here are a few common scenarios:

### 1. Engine Won't Start

Check the fuel level, ensure the spark plug is clean, and verify the choke is correctly positioned. The manual provides a diagnostic flowchart to pinpoint the exact cause.

### 2. Uneven Cutting

Inspect the blade for damage or uneven wear. Adjust the blade height and ensure the mower is level on the ground.

### 3. Excessive Vibration

Check for loose components, such as the steering wheel or blade guard. Tighten all fasteners and replace any worn parts.
