list of pokemon by johto pokedex

Published: September 3, 2026 | Index ID: #-

Introduction

For Pokémon fans, the Johto region is a nostalgic reminder of the early days of the franchise. Released with Generation /II games,*Pokémon Gold* and *Silver*, Johto introduced 100 new creatures, each with its own unique design, abilities, and evolutionary lines. The region's Pokédex, a comprehensive database of every known Pokémon, became an essential tool for trainers seeking to complete their collections. Whether you're a seasoned veteran planning a new playthrough or a newcomer exploring the world for the first time, having a clear and organized list of Pokémon by Johto Pokédex number can dramatically streamline your journey. This article delivers a complete, up to date guide that covers every entry from #152 to #251, along with helpful tips on how to navigate the Pokédex, discover rare regional variants, and track evolution chains.

Understanding the Johto Pokédex

The Johto Pokédex is a two tier system that records each Pokémon's national number, regional number, type, and evolutionary status. While the national Pokédex assigns a unique number to every Pokémon in the entire Pokémon universe, the Johto Pokédex focuses exclusively on the creatures native to the Johto region. The numbering starts at 152 (Chikorita) and ends at 251 (Celebi). Each entry is accompanied by a brief description, height, weight, and other trivia that enriches the trainer's experience.

Key Features of the Johto Pokédex

- Regional Variants: Some Pokémon have different appearances or abilities in Johto compared to Kanto.
- Evolution Chains: The Pokédex clearly indicates whether a Pokémon can evolve and, if so, into which form.
- Type Information: Type combinations are highlighted, helping trainers strategize for battles.
- Trivia & Lore: Fun facts about each Pokémon's background, such as its habitat or role in Johto's culture.

How to Navigate the Johto Pokédex Efficiently

Mastering the Pokédex is not just about scrolling through a list; it's about understanding the system that organizes Pokémon. Below are practical steps and tips that can help you find what you're looking for quickly.

1. Use the Search Function

Most online Pokédex platforms provide a search bar where you can type a Pokémon's name or number. This is ideal for locating a specific entry without scrolling through the entire list.

2. Filter by Type or Evolutionary Stage

Filters allow you to group Pokémon by type (e.g., Fire, Water, Psychic) or evolutionary status (e.g., basic, evolved, mega). This feature is particularly useful if you're building a team with balanced types.

3. Explore Evolution Chains

Many Pokédex entries link to their evolutionary partners. Click on a Pokémon's evolutionary line to see the complete progression, which helps you plan which forms to capture first.

4. Bookmark or Create a Collection

Some Pokédex tools let you create custom lists or collections. Use this feature to keep track of Pokémon you've already caught, those you still need, and any special variants you're chasing.

Full List of Pokémon by Johto Pokédex Number

Below is a comprehensive, alphabetically arranged list of every Pokémon found in the Johto Pokédex. Each entry includes the national Pokédex number, Johto Pokédex number, name, type(s), and a short note about its significance or evolutionary status.
